Description :

This paraffin heater melts wax and holds it at a set temperature in an 11 L stainless steel bath with a lid and a water reservoir. Digital control covers 20 to 90 °C, and the unit draws 2 kW from a 230 V, 50 Hz supply. Water-level detection works with dry-running and over-temperature cut-outs.

Paraffin heater specifications

Parameter	Detail
Capacity	11 L
Temperature control	Digital, 20-90 °C
Power	2 kW
Supply	230 V, 50 Hz
Bath	Stainless steel, with lid and water reservoir
Water level	Water-level detection
Cut-outs	Dry-running cut-out and over-temperature cut-out
Features	Independent over-temperature protection
Documentation	Cleaning instructions
Product code	SCL302/050
Minimum order	10 units
Dispatch	Usually within 7 to 10 working days
Manufacturer	ScienceLab (Jain Scientific Equipments Pvt Ltd), Ambala, India

Wax bath tasks in a physiotherapy teaching room

Setting up before a practical. The technician checks the water in the reservoir, loads wax into the stainless steel bath, closes the lid and sets the digital control. Once the wax has melted, a student reads its temperature with a digital thermometer and notes it beside the value set on the control.

Dip method demonstration. A student volunteer removes rings and watches, washes and dries one hand, then dips it into the molten wax, lifts it out to let the coat set and dips again to build up layers. The tutor times each stage with a mechanical timer, and the coated hand is wrapped before the wax is peeled off.

Care between sessions. Keep the lid closed so dust stays out of the wax, and replace wax that has picked up debris. In a teaching department the heater often stands near ultra-high frequency equipment and other electrotherapy units, so give it a wa
