Description :

Disposable Wooden Tongue Depressor (Product Code: SLE/MDE/10) is a single-use, flat wooden blade used to hold the tongue down during examination of the patient's mouth and throat in clinics, hospitals, school health checks and ENT rooms. Each non-sterile depressor measures approx. 17 x 149 mm, is about 1.6 mm thick and has rounded ends. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, which also ships it abroad as part of its lab equipment export range.

Specifications

Parameter	Detail
Type	Wooden tongue depressor, disposable
Size	Approx. 17 x 149 mm
Thickness	Approx. 1.6 mm
Ends	Rounded extremities
Use	Single use only
Sterility	Non-sterile
Storage	Clean and safe environment; avoid dust and other environmental risks of damage
After use	Break immediately after use to prevent re-use (risk of cross contamination)
Product code	SLE/MDE/10
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is a Wooden Tongue Depressor Used For?

The depressor is laid on the front part of the tongue and pressed gently down so the examiner can see the tonsils, the back of the throat and the inside of the mouth, usually with a flashlight or head light. The rounded ends avoid sharp corners against the tongue and cheeks.

Because it is non-sterile and single use, take a fresh depressor from a clean, dust-free store for each patient and break it straight after the examination so it cannot be used again. Nursing schools and school health teams also keep them in stock for throat-examination practice and screening camps.

What to Specify When Ordering

- Quantity required (pack and carton sizes are confirmed at quotation)
- Confirmation that non-sterile depressors suit your use
- Other examination consumables to include, such as gloves or masks
