Product Name :

K-Slump Tester

Product Code :

SLE/CE/30

Description :

Specification:

- It can be used for in-situ measurements or inside test moulds and forms.
- Results can be correlated against the slump test.
- This device is used to determine the workability and degree of compaction of fresh concrete after being placed in the forms.

The operation is very simple:

- **Total length:** 300 mm
- **Weight approx.:** 500 g
- The calibrated hollow tube has a dia. of 20 mm.
- Insert the tester into the concrete up to the level of the disc, after 60 seconds, a measuring rod is lowered onto the surface of the concrete and the K-slump is read directly on a scale.
- Slump Tester for in-place measurements indicates correlation to the slump test.
- The probe determines workability of concrete and the degree of compaction.
- Includes correlation chart and instructions.
