Description :

Sized for children only, this fold-up board reads 0–120 cm in 0.1 cm steps on a metal scale. Laid flat, it takes the recumbent length of babies up to 24 months. Stood upright on its adjustable feet, it takes the standing height of children from 24 months. Accuracy and precision are both given as ±0.2 cm.

Child length-height board specifications

Parameter	Detail
Measures	Recumbent length of babies up to 24 months; standing height of children aged 24 months and above
Measurement range	0–120 cm

Product code	SLE/AE/012
Minimum order	10 units
Dispatch	Usually within 7 to 10 working days
Manufacturer	ScienceLab (Jain Scientific Equipments Pvt Ltd), Ambala, India

Growth-monitoring tasks with the child measuring board

Under-two length check. Lay the board flat with the headpiece at one end. One measurer cups the baby's head against it while the second keeps the body straight, presses gently on the knees and brings the wedge against both heels. Weigh the same baby on the newborn spring scale or the 25 kg dial spring scale and record both figures together.

Anganwadi health round. Stand the board upright, turn the adjustable feet until it stops rocking, and measure each child barefoot. Take arm circumference with a child
each
