Guidance	First aid guidance notes included
Case	One durable labelled case
Includes	Numbered bill of materials and replenishment list
Product code	SLE/MD/11
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Emergency First Aid Kit Used For?

This kit is sized for a group of about 10 people, which makes it a natural fit for a single classroom laboratory, a small workshop, a staff room or a site office. Plasters cover small cuts, the dressings and triangular bandages handle larger wounds, slings and support, the sterile eyepads protect an injured eye, and the antiseptic wipes help clean skin around a wound before a dressing goes on.

Because it comes with a wall bracket, the kit can hang at a fixed, visible point near lab benches or the exit, so anyone can find it quickly. The guidance notes give first-aiders a quick reminder of basic steps. Check the contents after every use and restock opened items, and send serious injuries for professional medical care.
