**Product Name :**

Piezo Transducer

**Product Code :**

SLE/EAM/18

## Description :

Demonstrate mechanical to electrical energy conversion with a voltmeter, data-logger or oscilloscope.

Consisting of a 15mm diameter ceramic element with integral, protective press-stud, the device gives voltage pulses of up to 20V when given a sharp tap.

The reverse effect can also be shown by connection to a signal generator whereby the device converts the electrical signal to sound waves.
