Product Name :

Three-phase Mobile Transformer

Product Code :

SLE/EPS/05

Description :

- The Three-phase Mobile Transformer is an essential tool for experiments and demonstrations of transformer theory.
- It consists of three identical transformers on a common core to create a three-limb, three-phase transformer.
- All tapings connect to coloured, shrouded sockets for safety.
- To show transformer principles clearly, the transformers operate as one volt each turn.
- The transformer is inside a steel enclosure, which has small wheels for ease of mobility.
- This means that the no-load output voltage is the same as the number of turns on the secondary.
- For a typical test, students connect the primary and secondary winding to suit their experiments.
- All tapings are accessible, so students may link the windings to suit any of the common three-phase connections.
- The transformer has a selection of high-voltage (primary) and low-voltage (secondary) tapings to select a range of input and output voltages.

Contact Science Lab for your Educational School Science Lab Equipments. We are best technical educational equipments manufacturers, technical educational equipments manufacturer, technical educational equipments supplier, technical educational instruments, technical educational instruments exporter, technical educational instruments manufacturer, vocational training lab instruments exporter.
