Product Name :

Free Vibration Of Beam Spring

Product Code :

SLE/ETM/05

Description :

- This product is part of a range that explores free vibrations in simple 'one degree of freedom' systems.
- This common system appears in machines and vehicle suspensions.
- A back panel fixes to the Test Frame.
- The panel holds a pivot and a non-contacting displacement sensor.
- This product includes a beam pivoted at one end, with the other end suspended by a coiled spring.
- The pivot contains high-quality self-aligning bearings that hold the left-hand end of a rigid beam, while allowing it freedom to rotate through a small angle.
- The sensor measures the oscillations at the right-hand end of the beam with negligible damping, while working to guide the movement.

Students to key scientific terms such as:

- Moment of inertia, Oscillation damping.
- Spring constant and Hooke's Law.
- Simple harmonic motion and frequency of oscillation.
- Phase difference between displacement and its derivatives.
- This product fits to the sturdy Test Frame for study or demonstration.

Contact Science Lab for your Educational School Science Lab Equipments. We are best educational equipment manufacturers india, educational equipments, educational equipments exporter, educational equipments exporters, educational equipments for science labs, educational lab equipment export.
