Product Name :

Temperature Measurement and Calibration
Apparatus

Product Code :

SLE/EA/12

Description :

- The Temperature Measurement and Calibration apparatus fits on a desk or bench top.
- It includes eight different temperature measurement devices and shows their characteristics and how to calibrate them against a standard.
- A carefully rated immersion heater in the tank heats the water steadily up to boiling, giving time to take accurate results.
- The built-in precision reference sensor works as an accurate temperature reference.
- A display shows the temperature from the reference sensor and the local pressure from the built-in pressure sensor.
- The display also calculates the local boiling point of water based on the barometric pressure.
- Students add crushed ice to the insulated icebox and clean water to the fully guarded water heater tank.
- The water heater tank has a drain tap for connection to a suitable container or local water drain.
- This helps students to change the heated water safely and quickly, reducing experiment time.
- The water heater tank includes a water level float switch and a safety temperature cut-out switch to turn off the heater in case of low water level.

Contact Science Lab for your Educational School Science Lab Equipments. We are best physics lab equipment supplier, physics lab equipment suppliers in ambala, physics lab equipments manufacturers, physics lab equipments suppliers, physics labware, school educational equipments.
