**Product Name :**

Bending Moments In a Beam

**Product Code :**

SLE/EG/11

## Description :

- Students apply loads to hangers suspended along the beam, held between two supports.
- One support allows rotational movement only, acting as a pinned support.
- The other support allows translational movement, acting as roller support.
- A load cell at the cut at mid-span of the beam measures the bending moment due to the load.
- Includes pointers that work with the scale on the platform for accurate positioning.
- This product includes a uniformly distributed load (UDL) that may be applied across the span of the beam for comparison of results with a single point load.
- The beam has a central span with an overhanging end, so that students can create both positive and negative bending moments.
- The load cell connects to the USB interface hub of the Structures platform for computer display and data acquisition.
- Students use textbook equations to predict the bending moments due to the load, comparing them with measured results, and learn how to create the influence line and bending moment diagrams.

Contact Science Lab for your Educational School Science Lab Equipments. We are best educational equipment manufacturers india, educational equipments, educational equipments exporter, educational equipments exporters, educational equipments for science labs, educational lab equipment export.
