Description :

Lizard Skeleton (Product Code: SLE/EZ/06) is a real lizard skeleton, mounted in its natural position, used to teach reptile anatomy in school and college zoology laboratories. Teachers and students use it to study the skull, backbone, ribs and sprawling limbs of a reptile, presented on a base under an acrylic cover in a 230 x 77 x 30 mm case. It is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, as part of its zoology lab equipment range.

Specifications

Parameter	Detail
Specimen	Natural bone
Mounting	Mounted in natural position
Presentation	On a base with acrylic cover
Case size	230 x 77 x 30 mm
Product code	SLE/EZ/06
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Lizard Skeleton Used For?

In a vertebrate practical, the lizard skeleton lets students pick out the features that mark a reptile: limbs that project sideways from the body, a long tail built from many small vertebrae, and ribs running along much of the trunk. Because the bones are mounted in the animal's natural stance, learners can see how the shoulder and hip girdles hold the body close to the ground, and relate that posture to how lizards move and hunt.

Teachers often place it next to amphibian and snake skeletons so a class can sort the three by limb structure and body plan, which makes it a practical lab specimen for biology teaching in India and elsewhere. Pass the case around rather than opening it, and use a hand lens for the fine toe bones and teeth. Keep it away from direct sunlight, and dust the acrylic with a soft, dry cloth.

Supplier

Jain Scientific Equipments Private Limited, which trades as ScienceLab, supplies this natural lizard skeleton from Ambala, Haryana. Schools, colleges, universities and distributors can source it together with other vertebrate skeletons and zoology teaching aids, for delivery across India and to international markets. More about the company is on the company profile page.

Related Zoology Equipment

Items that pair well with the lizard skeleton in a vertebrate comparison lesson:

- Snake Skeleton — a limbless reptile to compare with the lizard's four limbs and girdles.
- Frog Skeleton — an amphibian skeleton for contrasting ribs, spine and limb proportions.
- Lizard Dissection — a preserved specimen showing the soft organs the skeleton supports.
