Description :

Snake Skeleton (Product Code: SLE/EZ/07) is a natural-bone snake skeleton used to show how a limbless vertebrate is built in school zoology classrooms and college practicals. Mounted in a natural position on a base with an acrylic cover, it sits in a 300 x 98 x 30 mm case that displays the long chain of vertebrae and paired ribs. It is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, as biology lab equipment in India for labs that want real vertebrate specimens.

Specifications

Parameter	Detail
Material	Natural bone
Posture	Mounted in natural position
Display	Base with an acrylic cover
Case size	300 x 98 x 30 mm
Product code	SLE/EZ/07
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Snake Skeleton Used For?

A snake's body is built almost entirely from one repeated unit: a vertebra with a pair of ribs. Seeing that pattern on a real specimen helps students understand how snakes move by bending the body in waves, and why they need no limbs to travel, climb or swim. The skull is worth a close look too, because the loosely joined jaw bones explain how a snake can swallow prey wider than its own head.

In evolution and classification lessons the snake skeleton is often set beside a lizard skeleton, so learners can discuss limb loss within the reptiles. It is a useful addition to school biology lab equipment in India for Class 9 to 12 and undergraduate zoology. Ask students to sketch a short section of the spine through the cover, using a hand lens to pick out where each rib meets its vertebra.

Supplier

ScienceLab is the trading name of Jain Scientific Equipments Private Limited, based in Ambala, Haryana. The company supplies this snake skeleton to schools, colleges, museums of teaching specimens and resellers, and can combine it with other skeletons and field equipment on one quotation for buyers in India and international markets. See the company profile for background.
