Key Details

Parameter	Detail
Cards	108 cards
Numbers built	3-digit and 4-digit numbers, in a game context
Players	4 children
Age	7 years and above
Activity guide	Write-up with details of the activities
Game levels	Different levels depending on the challenge needed; involves multiple strategies and can also be enjoyed by adults
Concepts	Comparing numbers; forming the greatest and smallest numbers from given digits; reading and writing multi-digit numbers; expanding a number by place value; place value with addition and subtraction; mental addition, subtraction and multiplication
Product code	SLE/LP/04
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Are Digit Cards Used For?

One of the simplest activities asks children to take a handful of cards and arrange the digits into the greatest and then the smallest number possible. Reading the result aloud, writing it down and expanding it by place value shows at once whether a child understands that a digit's position, not just its face, decides its worth. Moving from 3-digit to 4-digit numbers raises the challenge once a group is ready.

The same cards support quick mental addition, subtraction and multiplication rounds. Because an answer can be reached in more than one way, players compare strategies and explain their thinking to each other, which is where much of the learning happens. A set can be kept in the maths corner alongside other educational lab equipment, ready for a group of four with very little preparation.
