Description :

Frog Skeleton (Product Code: SLE/EZ/08) is a mounted natural-bone frog skeleton used toteach amphibian anatomy in school biology rooms and undergraduate zoology practicals. It ispopular for spotting exercises, where students identify bones and adaptations at a glance, and itrests on a base under an acrylic cover in a 155 x 115 x 82 mm case. It is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, a biology lab equipment supplier inIndia, as a real lab specimen for biology teaching.

Specifications

Parameter	Detail
Specimen	Natural bone, mounted
Base and cover	On a base with an acrylic cover
Case size	155 x 115 x 82 mm
Product code	SLE/EZ/08
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Frog Skeleton Used For?

The frog is a classic type specimen in Indian zoology courses, and its skeleton shows clearly how the body is shaped for jumping. Students can trace the very short backbone ending in a rod-like urostyle, the long hind limbs, the broad, flat skull and the absence of true ribs. Comparing forelimb and hind limb bones also opens a discussion of how landing forces are absorbed.

Teachers use the skeleton for bone identification, labelled drawings and viva questions, and it pairs naturally with a frog dissection model where hands-on dissection is not practised. View it from the side as well as from above to see the limb girdles clearly. Keep it dry and out of strong sunlight, and clean only the acrylic cover with a soft cloth.

Supplier

This frog skeleton is supplied by Jain Scientific Equipments Private Limited, which trades as ScienceLab from Ambala, Haryana. Schools, colleges and universities can order it singly or as part of a set of vertebrate skeletons, with delivery across India and to international markets. Company details are on the company profile page.

Related Zoology Equipment

Useful companions for a frog anatomy practical:

- Frog Dissection Model — shows the internal organs that sit within the skeleton.
- Frog Dissection — a preserved specimen for demonstrating soft-tissue anatomy.
- Mi-Own Frog Model — another frog teaching aid from the same zoology range.
- Lizard Skeleton — a reptile skeleton for amphibian-versus-reptile comparisons.
