| Case | Neoprene carrying case |
| Product code | SLE/EZ/17 |
| Supplied by | Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India |

### What Is the Bifocal Lens Used For?

Two powers in one lens let students move from an overview to fine detail without changing tools: 3x shows the whole of a beetle, leaf or small skull, while 6x brings out hairs, veins, scales or tooth rows. The rimless design leaves the edge of the field of view clear, which helps when scanning across a tray of pond animals or a pinned insect. It is a convenient hand lens magnifier for school labs in India and for teachers leading nature walks.

For the sharpest image, hold the lens steady and move the object, or your head, until it comes into focus. Never leave a magnifier lying in direct sunlight, as it can focus the sun's rays and scorch surfaces. Wipe the lens with a soft lens cloth, keep fingers off the optical surface, and return it to its neoprene case after each session to protect it from scratches.

### What to Specify When Ordering

- The handle length you need — 8 in, 5 in or 3 in, as listed.
- The quantity, for example one per group or one per student for field trips.
- Any lens cloths or specimen sets to be quoted alongside the magnifiers.

### Supplier

Jain Scientific Equipments Private Limited, under its ScienceLab trading name, supplies this bifocal lens from Ambala, Haryana, India. Schools, colleges, nature education centres and resell[illegible]al mark[illegible]
