Description :

Tray (Product Code: SLE/EZ/31) is a 22.5 x 25 cm plastic tray used for picking out small critters from field samples and for studying small objects on the bench in biology and general science classes. Teachers use it to give each group a defined work area that keeps animals, seeds,shells or soil samples together and contains spills. It is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, as practical, everyday school biology lab equipment in India.

Specifications

Parameter	Detail
Material	Plastic
Size	22.5 x 25 cm
Intended use	Picking critters; studying small objects
Product code	SLE/EZ/31
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Plastic Tray Used For?

A leaf-litter or soil sample tipped onto a tray can be spread out and searched a little at a time, so students find the woodlice, springtails, beetles and worms hiding in it. The same tray works for a scoop of pond water, a handful of seeds to sort, or shells and pebbles to examine under a lens. Keeping everything inside the tray means fewer lost specimens and a cleaner bench at the end of the lesson.

At 22.5 x 25 cm, this tray is larger than a pocket sorting tray but still easy to pass between students. Use soft forceps or a small brush to move animals, keep live specimens in the shade, and return them to where they were found. Wash the tray with mild soap and water afterwards. A set of trays is a simple, low-cost way to organise group practicals in school biology lab equipment.

Supplier

This plastic tray is supplied by Jain Scientific Equipments Private Limited, which trades as ScienceLab, from Ambala, Haryana, India. Schools, colleges, activity centres and educational dealers can order it in class sets alongside nets, magnifiers and sorting trays, for delivery within India and to international markets. More information is on the company profile page.

Related Zoology Equipment

Tools that are handy alongside the tray:

- Sorting Tray — a smaller white tray for separating critters into groups.
- Invertebrate Sampling Tray — a large fibreglass tray for whole stream samples.
- Forceps, Plastic — gentle forceps for lifting small animals from the tray.
- Lens — a 3x and 6x magnifier for studying small objects in the tray.
