Product Name :

Dissecting T-Pins

Product Code :

SLE/EDE/10

Email : sales@scilabexport.com
Phone: +91-7082934803

Description :

Dissecting T-Pins (Product Code: SLE/EDE/10) are 2" long pins made of nickel-plated steel, each with a T head that allows a firm grip when pushing the pin in or pulling it out. A box contains about 100 pins, enough to pin out specimens for a full class on a dissection tray in school labs across India. They are supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, as part of its dissection equipment range.

Specifications

Parameter	Detail
Product type	Dissecting pins, T-head
Head	T head for a firm grip
Length	2"
Material	Nickel-plated steel
Pack	Box of about 100 pins

Typical Use

T-pins anchor a specimen to a wax pan, wax tray or soft dissecting pad so it does not slide while being cut. Pins are usually pushed in at a slant, leaning away from the specimen, so their heads stay clear of the working area; after the first incision, further pins hold the skin or body wall folded back so internal organs are exposed. The cross-bar head spreads the pressure of the thumb, which makes pinning into firm wax easier for students.

At the end of the practical, pull the pins straight out by the head, wash and dry them, and return them to the box. Counting pins out and back in is a simple habit that keeps loose sharps off the floor and benches. Teachers stocking consumables for zoology lab equipment in India often keep a spare box on hand, since pins go missing over a term.

Supplier

ScienceLab, the trading name of Jain Scientific Equipments Private Limited in Ambala, Haryana, supplies these pins together with the pans, trays and instruments they are used with, so a school can source a complete dissection bench from one place. More about the company is on the company profile page.

Related Dissection Equipment

Surfaces and tools used together with T-pins:

- Dissection Pan — black wax pan that takes and holds the pins.
- Dissecting Tray with Wax — an alternative wax-filled tray for pinning.
- Dissection Replacement Pad — a fresh pinning pad when an old one is worn.
- Dissecting Hook & Chain Set — holds walls open where pins alone are not enough.
