Product Name :

Probe, Chrome

Product Code :

SLE/EDE/14

Description :

Probe, Chrome (Product Code: SLE/EDE/14) is a teasing needle — also known as a small probe or dissecting needle — made of steel and 140 mm long. It is used to explore an opened specimen, separate layers of tissue and point out structures without cutting them, and it makes a dependable addition to a dissection set for biology students. The probe is made by a biology lab equipment manufacturer in India, **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala.

Specifications

Parameter	Detail
Product type	Teasing needle (small probe / dissecting needle)
Material	Steel
Length	140 mm
Suitable for	Teasing, separating and tracing structures in dissection and slide work

Typical Use

Once a specimen has been pinned open, the probe is slid beneath a blood vessel, nerve or gut loop to lift it gently away from the surrounding tissue, so students can follow where it goes and label it in their diagrams. Its reach is handy when working deeper inside a body cavity, and the same tool can tease apart a small piece of tissue in a drop of water before a temporary mount is made.

Teachers often use a probe as a pointer during a live demonstration, indicating structures in the pan without disturbing them. Clean it after each class, dry it immediately and keep it apart from blades so the tip is not dulled. As a routine item from a science apparatus manufacturer in India, it is usually ordered in class quantities with forceps and scissors.

Manufacturer

ScienceLab probes are made by Jain Scientific Equipments Private Limited in Ambala, Haryana. Operating under the ScienceLab brand, the company supplies educational and laboratory equipment to institutions, dealers and project buyers; its company profile gives the full picture.

Related Dissection Equipment

Tools that are commonly used alongside this probe:

- Probe & Hook — adds a hook end for lifting and holding structures.
- Teasing Needle (Probe) — another teasing probe from the zoology range.
- Dissecting Needle — a sturdy steel needle for finer teasing.
- Forceps (Tweezers) Bent — curved tweezers to grip what the probe has lifted.
