# Description :

**Scalpel** (Product Code: SLE/EDE/16) is a stainless steel cutting instrument with a 1.5" blade and an overall length of about 6". It makes the clean, controlled incisions that open a specimen, cut through membranes and trim plant material, and it is used by students, teachers and technicians in school and college practicals. The scalpel is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, a scientific laboratory equipment manufacturer serving India and international markets.

## Specifications

| Parameter | Detail |
|---|---|
| Product type | Scalpel |
| Material | Stainless steel |
| Blade | 1.5" |
| Overall length | 6" (approx) |
| Suitable for | Incisions and trimming in dissection and plant anatomy practicals |

## Typical Use

The scalpel is held like a pencil for fine cuts, with the index finger resting on the back of thehandle to steady the blade. In an animal dissection it makes the first shallow incision through the skin, frees organs from connective tissue and cuts neatly where scissors would tear. In plant work it slices stems, fruits and seeds in half so internal structures can be drawn and compared.

To keep the edge sharp, cut only on a wax pan, board or pad rather than on glass or metal. Pass the scalpel handle first, cut away from the body and put it down with the blade facing away from the user; after the practical, clean it carefully by holding the back of the blade and dry it before storage. It is one of the core items teachers list when ordering zoology lab equipment for a new batch of students.

## Manufacturer

ScienceLab scalpels are made by Jain Scientific Equipments Private Limited in Ambala, Haryana, the company that owns the ScienceLab trading name. For institutional and tender buyers who need vendor registration details, it is a GST-registered business in Haryana (GSTIN 06AAECJ8618A1ZT) and holds the global Legal Entity Identifier 3358004HRD1JIVXKYX49.
