Product Name :

Probe & Hook

Product Code :

SLE/EDE/17

Email : sales@scilabexport.com
Phone: +91-7082934803

Description :

The **Probe & Hook** (Product Code: SLE/EDE/17) is a chrome plated steel dissecting probe with a hook on one end, 6 inches in length. Students use it to lift, separate and hold back soft tissue during practical dissections without cutting it, which is why a probe of this kind is a routine item in school biology lab equipment in India. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, for schools, colleges and teacher-training laboratories.

Specifications

Parameter	Detail
Type	Dissecting probe withhook
Material	Chrome plated steel
Hook	On one end of the probe
Length	6 inches

Typical Use

During a dissection the shaft is run along the natural divisions between organs to free connective tissue, to follow the course of a blood vessel or nerve, or to point out a structure to the class without damaging it. The hooked end catches a membrane or a flap of skin and draws it aside, so the region underneath stays in view while it is pinned, sketched or labelled. Because it is not a cutting tool, it is a safer first instrument for younger students than a scalpel.

As part of zoology lab equipment in India the probe and hook is usually issued alongside forceps and dissecting pins, and it is just as handy for opening up flowers or other plant material in botany practicals. After each session rinse off tissue and preservative, wash in mild detergent and dry the probe completely before storage; avoiding long soaks in water or harsh disinfectants helps protect the chrome plating.

Manufacturer

This probe is produced by Jain Scientific Equipments Private Limited, the company behind the ScienceLab brand, which makes dissection instruments and other teaching apparatus in Ambala, Haryana, India, for schools and colleges in India and international markets. Related Dissection Equipment

Items commonly used alongside the probe and hook at the same dissection bench:

- Probe, Chrome — a chrome probe without a hook, for general tracing work
- Dissecting Hook & Chain Set — for keeping tissue retracted during longer dissections
- Forceps (Tweezers) — to grip tissue while the probe separates it
- Dissecting T-Pins — to fix the specimen and hold structures drawn aside by the hook
- Dissection Pan — a working surface to hold the specimen
