Description :

Binoculars (Product Code: SLE/M/48) are hand-held 6x binoculars used to watch birds, animals and distant landmarks during nature study, field trips and outdoor science lessons. They pair 35 mm objective lenses with a durable plastic body, and the colour may vary. These binoculars, a simple addition to an ecology science kit in India, are supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India.

Specifications

Parameter	Detail
Magnification	6x
Objective lens	35 mm
Body material	Durable plastic
Colour	May vary
Product code	SLE/M/48
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Are Binoculars Used For?

Binoculars let learners observe wildlife without disturbing it. On a nature walk students can identify birds by markings, count waterbirds at a pond, follow the behaviour of animals at a distance or pick out tree canopies and rock features that are hard to reach. In geography lessons they help students spot landmarks while reading a map in the field.

Before observing, adjust the two barrels until the view forms a single circle, then focus on something far away. A moderate 6x magnification keeps the image steady in the hand and makes targets easy to find, which suits beginners in environmental science lessons. Wipe the lenses with a lens cloth after outdoor use, and remind students never to look at the Sun through binoculars.

Supplier

These binoculars are supplied by ScienceLab, the trading name of Jain Scientific Equipments Private Limited in Ambala, Haryana, to schools, eco-clubs, colleges, dealers and importers in India and international markets. For vendor registration, the supplying company is Jain Scientific Equipments Private Limited (CIN U29309HR2020PTC087597, GSTIN 06AAECJ8618A1ZT). Further company information is on the ScienceLab profile.

Related Laboratory Equipment

Items that pair with binoculars on field trips and nature walks:

- Series Binoculars — a waterproof 8x or 10x option for older students
- Telescope Refractor — more magnification for distant and night-sky viewing
