Description :

Slate, Plastic, French Style, A4 (Product Code: SLE/CS/017) is an individual A4 writing boardfor students, printed with 1cm squares on one face and French-style “double-ligne” handwriting rulings on the other. The ruling guides letter height and slant, which makes it well suited toschools teaching cursive handwriting in the French tradition, while the squared side serves fornumbers and simple drawings. It is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**,Ambala, a school laboratory equipment supplier in India that also produces classroom writingmaterials, and is packed in boxes of 20 slates.

Specifications

Parameter	Detail
Size	A4 (210 x 297mm), thickness 2mm, rounded corners
Material	High impact polystyrene (HIPS) sheeting, colour white, matt finish on both sides
Printing	Silk screen printed in cyan blue on both sides
Front side	1cm squares
Reverse side	French-style “double-ligne” rulings: 1 double line, height 5mm, followed by 2 sets of lines, height 8mm each, with additional right-slanting lines at4cm intervals
Border	8mm cyan blue border on all sides, front and reverse
Writing tools	HB pencil and eraser (natural or synthetic rubber)
Cleaning	Washable in water
Rigidity	Rigid enough for a student to write with the slate resting on the knee
Packing	Box of 20 slates
Estimated weight	2.600kg
Estimated volume	2.580cdm

Typical Use

On the ruled side, pupils form small letters within the 5mm double line and let ascenders and descenders reach into the 8mm lines above and below, using the right-slanting guides to keep a consistent cursive slope. Teachers can then flip the slate to the 1cm grid for number formation, counting squares, simple shapes and early area work. Because it is written on with an HB pencil and cleaned with an eraser, the same slate can be reused for practice lesson after lesson, saving exercise-book pages for final work.

The slate is stiff enough to rest on a child's knee, which helps in classrooms where desks are shared or lessons take place outdoors. Wash the slates in water when pencil marks build up and dry them flat before stacking them back in the box. Education departments preparing a classroom or lab ves one s
