Product Name :

Slate, Plastic, A4

Product Code :

SLE/CS/018

Description :

Slate, Plastic, A4 (Product Code: SLE/CS/018) is a reusable A4 writing board for each pupil, with a 1cm square grid on the front and evenly spaced 8mm lines on the back, both screen printed in cyan blue on white plastic. The plain line spacing suits handwriting practice in any script, and the grid side handles numbers, tables and simple sketches, so one slate covers both language and maths work. It is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, whose educational laboratory equipment in India's schools is complemented by everyday classroom items such as this, packed in boxes of 20.

Specifications

Parameter	Detail
Size	A4 (210 x 297mm)
Material	White high impact polystyrene (HIPS) sheeting, matt finish on both sides
Thickness	2mm, with rounded corners
Printing	Silk screen printed in cyan blue on both sides
Front side	1cm squares
Reverse side	8mm lines
Border	8mm cyan blue border on all sides
Writing tools	HB pencil and eraser (natural or synthetic rubber)
Care	Washable in water
Rigidity	Sufficiently rigid to write on with the slate resting on the knee
Packing	Box of 20
Estimated weight	2.8kg

Typical Use

Teachers use a class set for quick-response activities: pupils write a spelling, a sum or a one-word answer, hold the slate up, and the teacher checks the whole room at a glance. The 8mm lines give even spacing for copying sentences, while the 1cm squares help children line up digits in columns for addition and subtraction or draw shapes by counting squares. Pencil work rubs out cleanly with an eraser, so the slate can be used again immediately.

Even in classrooms adding e-learning science kits, India's primary teachers still value a slate for fast, paper-free practice that needs no power or screens. Wash the slates in water when graphite builds up, let them dry before stacking, and keep a set for each class section so they are not shared between rooms.
