Product Name :

Diamond Marker

Product Code :

SLE/CL/57

Email : sales@scilabexport.com
Phone: +91-7082934803

Description :

Diamond Marker (Product Code: SLE/CL/57) is a pencil-style glass-writing tool whose diamond tip scratches a permanent identification mark onto plain, non-frosted microscope slides. Laboratories at every level, from a basic health-centre lab to a reference centre, use it to number slides before staining, and it is standard lab equipment for college histology and microbiology practicals in India. **Jain Scientific Equipments Pvt Ltd (ScienceLab)** manufactures it inAmbala, India.

Specifications

Parameter	Detail
Tip	Glass-writing diamond tip
Handle material	Wood, plastic or aluminium
Supplied as	3 pencils of the same size
Marks on	Glass slides of the non-frosted type
Purpose	Identification marking of slides
Used in	Laboratory services from basic laboratories to reference centres

Typical Use

Before a smear is spread, write the sample or patient number near one end of the slide with light, steady pressure, as you would with an ordinary pencil. Because the mark is cut into the glass rather than written in ink, it survives staining, alcohol fixation, xylene and immersion oil, and the slide can still be traced months later when it is pulled from storage for review or teaching.

Put the marker away after each session so the tip is not knocked against hard surfaces, and wipe away the fine glass dust after writing so it does not end up under the cover glass. It sits in the slide-preparation drawer alongside other small biology lab equipment in India, such as spreaders, forceps and cover glasses.

Manufacturer

Jain Scientific Equipments Private Limited, an Ambala, Haryana manufacturer trading as ScienceLab, makes this marker along with the slide-handling and staining items that clinical and teaching labs use every day. See our company profile for more about the company.

Related Clinical Laboratory Equipment

Items used with the marker in slide preparation and storage:

- Microscope Slides Glass — plain slides that take a clear diamond-etched mark.
- Cover Glass Slide — covers the specimen once the marked slide is prepared.
- Slide Drying Rack — holds numbered slides upright to dry after staining.
- Storage Box, 100 Slides — files marked slides in order for later reference.
