Estimated weight / volume (catalogue figures)	0.333 kg / 5.911 dm^3
Product code	SLE/PE/013
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Rubber/Foam Ball Used For?

For toddlers and pre-schoolers, a small ball is the starting point for almost every movement skill. Children sit in a circle and roll it to each other, practise two-handed catching from a short distance, throw it into a hoop or basket, and chase and stop it with their feet. The assorted colours make simple sorting and listening games possible – “everyone with a blue ball, stand up” – so the same balls also support colour and number learning.

Always supervise young children during ball play, and check the balls regularly, taking any damaged ball out of use. Wipe or wash them with mild soapy water and let them dry before putting them back in the toy store.

Supplier

Pre-schools, day-care centres and primary schools obtain this play ball from Jain Scientific Equipments Private Limited, which trades as ScienceLab in Ambala, Haryana. It can be ordered in the numbers a class needs, together with the other early-years and PE items in our range. The company profile explains more about us.
