Description :

Alkaline Battery Dry Cell (Product Code: SLE/HE/09) is a C-type, 1.5 V alkaline cell used to power torches, flashlights and other battery-operated equipment in hospitals, clinics, laboratories and field programmes. It measures 26 × 50 mm (50 mm high), the C size taken by devices such as laryngoscope handles and many portable lights. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, as a lab and hospital consumable that can be ordered alongside the equipment it powers.

Specifications

Parameter	Detail
Type	Alkaline dry cell
Size	C
Voltage	1.5 V
Dimensions	26 × 50 mm (50 mm high)
Intended use	Torches/flashlights and other battery-operated equipment
Chemistry	Alkaline (primary dry cell)
Product code	SLE/HE/09
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Alkaline C Battery Used For?

C cells sit between the smaller AA and larger D sizes and are common in torches, laryngoscope handles, portable examination lights and teaching apparatus. Hospitals and health posts keep a stock so that hand-held devices, such as the laryngoscope on an emergency trolley, can be put back into service straight away when their cells run down.

Insert cells in the direction marked in the battery compartment, and replace all the cells in a device at the same time rather than mixing new and used ones. Take cells out of equipment that will be stored for a long period – the laryngoscope instructions give the same advice – and keep spares in a cool, dry place. Dispose of used cells according to local waste rules.

Manufacturer

Jain Scientific Equipments Private Limited, trading as ScienceLab, manufactures C-type alkaline cells in Ambala, Haryana, as part of its range of lab and hospital consumables. Hospitals, schools and project buyers can add batteries to the same quotation as the torches, laryngoscopes and instruments that use them. Our company profile explains more about ScienceLab.
