Scalpel handle	No. 4
Probe	Double-ended, 145mm
Listed uses	Abscesses, simple suturing, repair of perineum or episiotomy, complex dressings
Intended setting	Health facility and dispensary
Product code	SLE/MD/04
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is a Suture Instrument Set Used For?

The suture set gives trained clinical staff the core instruments for closing a wound: the Mayo-Hegar needle holder grips the curved suture needle, the tissue forceps hold the wound edge, the Kocher artery forceps clamp, and the Deaver scissors cut sutures. The scalpel handle and double-ended probe are used when an abscess has to be opened and explored, and the set's description also lists perineal or episiotomy repair among its uses.

Suture material and scalpel blades are not among the listed contents and are ordered separately; choose blades that fit a no.4 handle. Clean, inspect and sterilise all instruments according to the facility's procedure before each use, and keep the needle holder jaws free of residue so they grip securely.

What to Specify When Ordering
