Product code	SLE/MD/05
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is a Delivery Instrument Set Used For?

The delivery set holds the instruments a midwife needs at the moment of birth. The two Kocher forceps clamp the umbilical cord for the time needed to tie it, one pair of scissors cuts the cord, and the episiotomy scissors are kept ready because, as the set's description notes, most episiotomies are performed at the last moment.

For that reason the set must always be available, complete and ready for use in the delivery room. Health facilities normally keep more than one set so that a sterilised set is on hand while another is being reprocessed, and they pair it with the separate suture set for repairing an episiotomy.

What to Specify When Ordering

- Number of delivery sets, based on births per day and sterilisation turnaround.
- Matching suture sets for episiotomy repair.
- Cord clamps or umbilical tape, if required.
- The delivery destination.
