Product Name :

Dental Mirrors, Plastic, Size 4, Pack of 12

Product Code :

SLE/BL/16

Email : sales@scilabexport.com
Phone: +91-7082934803

Description :

These plastic dental mouth mirrors have a size 4 head on a one-piece resin body, with a soft-grip handle and a flush-mounted lens. Each pack holds 12 mirrors, single-sided or double-sided as stated when ordering. A mouth mirror gives indirect vision of tooth surfaces, reflects light into the mouth and holds the cheek or tongue aside.

Plastic dental mirror specifications

Parameter	Detail

Pack	12 mirrors
Product code	SLE/BL/16
Minimum order	10 units
Dispatch	Usually within 7 to 10 working days
Manufacturer	ScienceLab (Jain Scientific Equipments Pvt Ltd), Ambala, India

Mouth mirror practice in the dental skills lab

Indirect vision on a model. Students hold the mirror in a pen grasp in the non-dominant hand, rest the ring finger on a nearby tooth and study the tongue side of the lower front teeth only through the mirror. A lower jaw teeth model or a human tooth set gives each student a fixed target for this drill.

Retraction and light. With the back of the mirror head, the student moves the cheek away from the upper molars and tilts the face to throw light onto the palate side of the teeth. Working beside a dental scaler held in the other hand, the mirror keeps the field open while the instrument does its work.

Setting out and storing. Lay one mirror per student on an instrument tray with the other hand instruments, and keep the rest in their pack until issued. Shelve single-sided and double-sided packs apart so each class gets the type its tutor asked for, and follow the institution's own cleaning procedure between sessions.
