Packing	Individually packed, folded in a transparent plastic bag; label shows short description and size in cm and inch
Product code	SLE/MR/01
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Child Body Bag Used For?

Paediatric wards, maternity units, mortuaries and disaster-response teams keep child-size body bags so that a young patient who has died can be moved without an oversized adult bag. The smaller 150 x 100 cm format means less loose material to fold and handle, which makes transfer more careful and respectful for staff and families alike.
