Use	Multiple use
Reprocessing	Disinfect in a chlorine solution, wash, then autoclave in a steam sterilizer
Role	Primary layer of clothing under personal protective equipment
Product code	SLE/MR/08
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is an XL Surgical Tunic Used For?

An XL surgical tunic is the first layer a theatre nurse, surgeon, midwife or ward worker puts on after changing out of street clothes; gowns, aprons, masks and gloves then go on top. Short sleeves keep the forearms free for hand scrubbing, and the V-neck lets the tunic slip on and off quickly at shift change without any fastenings to undo.

The extra-large size suits taller or broader staff and leaves room to move during long procedures. Pick blue or green to match your theatre or department colour scheme, and pair each tunic with XL trousers. After use, disinfect the tunic in a chlorine solution, wash it and autoclave it in a steam sterilizer, a cycle the fabric is specified to withstand.
