Powder	Powder-free
Size	8.5
Total length	Approximately 280 mm
Width	Approximately 108 mm (± 5 mm)
Condition	Sterile
Use	Strictly single use
Estimated weight	0.04 kg
Estimated volume	0.2 dm^3
Product code	SLE/CPG/010
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Are Powder-Free Surgical Gloves Used For?

Powder-free surgical gloves are worn by surgeons, scrub nurses and assistants for operations and other procedures that call for a sterile glove. The listing describes them as protecting both the patient and the medical team from cross-contamination, and because there is no powder, none is carried onto instruments, dressings or the operating field.

Open the sterile packaging only at the point of use and put the gloves on without touching their outer surface. Being strictly single use, a pair is discarded after each procedure or as soon as a glove is torn. Natural latex is unsuitable for anyone with a known latex allergy, so keep a non-latex alternative available. The listing also advises ordering in sufficient quantity, so staff are never tempted to reuse gloves.

What to Specify When Ordering
