Description :

Draw Sheet, Plastic, 90x180cm (Product Code: SLE/CPG/013) is a polyethylene (PE) sheet laid across a hospital bed to keep the mattress and linen protected from body fluids in wards, delivery rooms and clinics. Nursing teams place it under the patient's hips and trunk; this sheet is100–150 microns thick, made of opaque or translucent PE and delivered non-sterile. It is suppliedby **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, to hospitals and buyers handling laboratory equipment tenders in India.

Specifications

Parameter	Detail
Type	Plastic draw sheet (bed protection)
Material	Opaque or translucent plastic, polyethylene (PE)
Nominal size	90 x 180 cm
Width	90–110 cm
Length	150–180 cm
Thickness	100–150 microns (0.10–0.15 mm)
Sterility	Non-sterile
Product code	SLE/CPG/013
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Plastic Draw Sheet Used For?

A draw sheet covers only the central part of the bed, where spills, urine, wound drainage or delivery fluids are most likely to reach the mattress. The plastic layer acts as a barrier, and a cotton sheet is usually placed over it so the patient does not lie directly on the plastic. After soiling, staff change the draw sheet instead of stripping the entire bed.

Typical settings include general wards, maternity and labour rooms, elderly care and field clinics. The long side of the sheet is laid across the bed so that both ends can be tucked under the mattress and the sheet stays in place. Hospitals ordering ward items as a scientific equipment bulk supply can add the draw sheet to the same enquiry as their dressings and drainage bags.

What to Specify When Ordering

- Required width (listed range 90–110 cm) and length (listed range 150–180 cm)
- Thickness within 100–150 microns, if your specification fixes one value
- Opaque or translucent PE
- Quantity per ward or per consignment
