Description :

Tube, Feeding, L40cm, sterile, Disposable (Product Code: SLE/CPG/016) is a single-use PVC enteral feeding tube used to pass nutrients through the mouth or nose into the stomach, including for feeding children, in paediatric wards, neonatal units and nutrition centres. It is about 40–50 cm long, with a Luer connector and stopper, a smooth rounded tip with two side windows and a mark 20 cm from the distal end. It is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, for scientific equipment bulk supply to hospitals and nutrition programmes.

Specifications

Parameter	Detail
Type	Sterile enteral feeding catheter (gastric tube), single channel
Length	Approximately 40–50 cm
Marking	Mark at 20 cm from the distal end
Proximal end	Connector with Luer tip and stopper, for Luer-tip feeding syringes
Distal end	Rounded, smooth, with two side windows
Material	Polyvinyl chloride (PVC)
Diameter	Expressed in Charrière (French gauge); colour code / external diameter visible on the connector
Sterility	Sterile; initial sterilisation by ethylene oxide gas
Use	Single-use, disposable
Estimated weight	0.005 kg
Estimated volume	0.099 dm^3
Product code	SLE/CPG/016
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Sterile Feeding Tube Used For?

A feeding tube carries liquid feeds or nutrients directly into the stomach when a patient cannot take them safely by mouth. This tube is passed through the mouth or nose, and its Luer connector accepts a Luer-tip feeding syringe; the stopper closes the connector between feeds.

The mark 20 cm from the tip gives staff a visible reference point while the tube is placed and checked. The listed size is described as the one most commonly used, and the colour code on the connector shows the diameter at a glance. Buying the tubes and matching Luer-tip syringes from one lab consumables supplier in India helps keep connector types consistent on the ward.

What to Specify When Ordering
