Description :

Catheter, Urethral, Sterile, disposable (Product Code: SLE/CPG/021) is a Nelaton-tip urinary catheter without a balloon, used to drain urine from the bladder for short-term catheterisation in wards, emergency rooms and clinics. This CH14 PVC catheter is 30–40 cm long, with a soft, rounded closed tip, two lateral eyes and a colour-coded cup connector for a urine bag. It is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, to hospitals and to lab equipment distributors in India.

Specifications

Parameter	Detail
Type	Urethral catheter without balloon, Nelaton tip
Diameter	CH14 (Charrière / French gauge)
Length	30–40 cm
Material	Polyvinyl chloride (PVC)
Distal end	Atraumatic, soft, rounded and closed, with 2 lateral eyes
Proximal end	Colour-coded cup connector, allowing connection to a urine bag
Sterility	Sterile; initial sterilisation by ethylene oxide gas
Use	Single-use; short-term catheterisation
Estimated weight	0.012 kg
Estimated volume	0.128 dm^3
Product code	SLE/CPG/021
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Urethral (Nelaton) Catheter Used For?

Unlike a Foley catheter, a Nelaton catheter has no balloon and is not retained in the bladder: it is passed in, used to drain urine and then removed, which is why it is listed for short-term catheterisation. The closed, rounded tip is designed to be atraumatic, while the two lateral eyes let urine enter the catheter.

The instructions for use call for strict aseptic technique; if lubrication is needed, the substance must not physically or chemically alter the catheter, and sterile water can be used. The cup connector joins a urine bag when the drained volume needs to be collected and measured. Hospitals that stock disposable lab equipment in India for their wards often keep this CH14 catheter next to a Foley catheter for longer-term drainage.

What to Specify When Ordering

- Size: CH14, 30–40 cm (mention any other CH size you require)
