Description :

Compress, Paraffin, 10x10cm, Sterile (Product Code: SLE/DDS/02) is a sterile, non-adherent wound dressing of wide-mesh cotton gauze impregnated with soft paraffin, used on wounds and especially burns in hospitals, burn units and clinics. Each compress measures about 10 x 10 cm, the listed box holds 10, and the dressing does not stick to the wound, so exudate can pass through. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala,India, as part of scientific equipment bulk supply for health services.

Specifications

Parameter	Detail
Type	Paraffin gauze compress (wound dressing)
Size	Approx. 10 x 10 cm
Construction	Elastic netting material with large mesh, impregnated with soft paraffin-based material
Netting material	Absorbent gauze, 100% cotton
X-ray	Non-detectable by X-ray
Sterility	Sterile; initial sterilisation by ethylene oxide gas or ionising radiation
Use	Disposable
Pack	Box of 10
Estimated weight	0.140 kg
Estimated volume	0.468 dm^3
Dimensions	10 × 10 cm
Product code	SLE/DDS/02
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Paraffin Gauze Compress Used For?

A paraffin gauze compress is laid directly on the wound as the contact layer. The soft paraffin coating keeps the dressing from sticking to the wound bed, and the large mesh lets exudate or pus pass through to an absorbent layer above, which is why the listing highlights its use on burns.

The listing warns against using it with local antibiotics, as this may lead to the development of resistant strains. A dry gauze compress and a bandage are normally placed over it to absorb fluid and hold it in position. Burn units and clinics that buy through a lab equipment distributor in India can order it by the box of 10.
