Product Name :

Medical Tape, Perforated, 10cmx5m, Roll

Product Code :

SLE/DDS/06

Description :

Medical Tape, Perforated, 10cmx5m, Roll (Product Code: SLE/DDS/06) is a perforated adhesive textile tape used to fix wound dressings, IV placements and medical tubing to the skin in wards, clinics and first-aid rooms. The 10 cm wide, 5 m long strip of woven acetate taffeta is non-stretchable, tears by hand and carries a rubber, resin and lanolin adhesive under an easily removed polyethylene liner. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India.

Specifications

Parameter	Detail
Type	Medical adhesive tape, perforated, roll
Width	10 cm
Length	5 m
Backing	Aerated and/or perforated textile strip of woven acetate taffeta, impregnated with adhesive
Adhesive	Mixture of rubber, resins and lanolin; traditionally incorporates zincoxide
Liner	Easily detachable protective polyethylene film
Handling	Non-stretchable; can be torn by hand
Water	Impermeable to water
Skin contact	High cutaneous tolerance; specified to adhere strongly yet be removable without significant skin lesion
Colour	White or flesh coloured
Sterility	Non-sterile
Use	Single use
Dimensions	10 cm × 5 m
Product code	SLE/DDS/06
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Perforated Medical Tape Used For?

Adhesive tape is the fixing layer of most dressings: short strips hold a compress on the skin, anchor the end of a bandage, or keep an IV placement and its tubing from pulling. The 10 cm width lets one strip cover the whole edge of a compress, and because the tape tears cleanly by hand, staff can prepare lengths without reaching for scissors.

For good adhesion, apply the strip to clean, dry skin and press it down along its length; when changing the dressing, peel it back slowly while supporting the skin. Anyone with a known sensi nd colleg enqui
