Description :

Blanket, Survival, 220x140cm (Product Code: SLE/DDS/07) is a lightweight wrap-aroundblanket of non-stretch polyester film used to protect casualties and patients against cold, heat,wind and rain in emergency care, transport and first-aid kits. One side is silver coated and reflectsup to 90% of radiated heat, and the film is about 12 µm thick, wind and waterproof, rot proof andflexible in freezing temperatures. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India.

Specifications

Parameter	Detail
Size	Rectangular; length approx. 220 cm, width approx. 140 cm
Thickness	Approx. 12 µm
Material	Non-stretch polyester film
Coating	One side silver coated; reflects up to 90% of radiated heat
Weather resistance	Wind proof, waterproof and rot proof
Low temperature	Stays flexible in freezing temperatures
Construction	Lightweight, flexible wrap-around blanket; easy to unfold, strong, tear resistant
Sterility	Non-sterile
Use	Single use
Dimensions	220 × 140 cm
Type	Thin reflective blanket
Product code	SLE/DDS/07
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Survival Blanket Used For?

A survival blanket is wrapped around a person to cut down heat exchange with the surroundings – for example a casualty waiting outdoors for transport, or a patient being moved between buildings in bad weather. The direction of the silver coating sets the effect: facing outward, it reflects heat away and shields the person from hot surroundings; facing inward, it preserves body heat and keeps out wind and humidity.

Because the film is light and folds flat, the blanket is easy to keep in a first aid box in a lab, a school bus or a field kit. Unfold it fully, wrap it closely and tuck the edges in to reduce draughts. If necessary it can be cut into smaller pieces for children and newborns, as the product description notes.
