Description :

Tape Umbilical, 3mmx50m, Non-sterile (Product Code: SLE/DDS/012) is a braided, flat cotton ligature tape used to tie the umbilical cord after birth in delivery rooms and maternity units. It is 100% cotton and non-absorbable, 3 mm wide and supplied as a 50 m non-sterile roll, from which facilities cut single-use lengths and sterilise them in a steam steriliser. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India.

Specifications

Parameter	Detail
Type	Umbilical ligature tape, roll
Width	3 mm
Length	50 m
Construction	Braided and flat
Material	100% cotton
Absorbability	Non-absorbable
Sterility	Non-sterile; the ligature thread can be sterilised in a steam steriliser
Use	Single use
Pack	Dispensing pack
Product code	SLE/DDS/012
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Umbilical Tape Used For?

Umbilical tape is a ligature thread for tying off the umbilical cord. A braided, flat cotton tape was selected for this job because it avoids damaging the cord and keeps knots from coming undone – the product notes specifically advise against monofilament, round or thin ligature thread.

The roll is delivered non-sterile, so the usual routine is to cut lengths in advance, pack them and sterilise them in a steam steriliser before they go to the delivery room. A single 50 m roll yields many ties. Hospitals that source instruments and autoclaves from one laboratory equipment supplier in India can add umbilical tape to the same order.

Manufacturer

Jain Scientific Equipments Private Limited, operating under the ScienceLab name in Ambala, Haryana, India, manufactures this umbilical tape roll to maternity hospitals, midwifery services, relief programmes and distributors in India and international markets. It belongs to a range of delivery and dressing consumables. The ScienceLab profile page has more about the company.
