Description :

Dissecting Board (Product Code: SLE/EDE/01) is a soft wood board with raised edges on which specimens are pinned out for dissection. The soft wood lets dissecting pins be pressed in easily by hand alone, with no hammer or tool, so students can fix and re-fix a specimen quickly as the dissection progresses. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, as biology lab equipment in India for school and college biology and zoology practicals, and pairs naturally with any dissection kit a school already uses.

Key Details

Parameter	Detail
Type	Dissecting board for pinning specimens
Material	Soft wood
Edges	Raised
Pinning	Pins can be pressed in easily by hand only
Suitable for	Biology and zoology dissection practicals in schools and colleges

Typical Use

The board provides a firm, pin-friendly working surface for dissecting preserved specimens andfor pinning out plant material or insects for study. Students lay the specimen on the board, fix it at the corners with pins pushed in by hand, and then open and pin back the tissue layer by layer so that each structure stays exposed while it is drawn or identified. The raised edges help keep fluids and small pieces of tissue on the board rather than on the bench.

For a class practical, set out one board per pair of students with a dissection set, a supply of pins and a dissecting needle. After use, remove all pins, wipe the board down, and let it dry fully before storage so the wood stays in good condition. Boards like this are a basic item on most lists of zoology lab equipment in India.

Manufacturer

This board is made by **Jain Scientific Equipments Private Limited**, which operates as **ScienceLab** from Ambala in Haryana and produces dissection equipment alongside a broad range of school and college laboratory products. Learn more on our company profile.

Related Dissection Equipment

Items used on the same bench during a dissection practical:

- Dissecting T-Pins — pins for fixing specimens to the board
- Dissecting Set, Student — the cutting and handling instruments for each student pair
- Dissecting Needle — for separating tissues and pointing out structures
- Forceps (Tweezers) — for lifting and holding tissue while pinning
- Dissecting Tray with Wax — an alternative wax-filled surface for wetter specimens
