Description :

Plastic Hand Scrubbing Brush (Product Code: SLE/MU/04) is a reusable nylon-bristle brush used to scrub hands before surgical intervention in operating theatres, delivery rooms and minor procedure rooms. Theatre teams choose it for its soft nylon bristles set in at least 5 rows on a compact polypropylene head of 7 to 9 cm. It is supplied non-sterile by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India.

Bristle material	Nylon, soft
Bristle rows	Minimum 5
Head length	7 to 9 cm
Width	3 to 4 cm
Height	1 cm
Use type	Reusable
Condition on supply	Non-sterile
Construction	Cleanable
Includes	Handle
Product code	SLE/MU/04
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Hand Scrubbing Brush Used For?

Before gloving for an operation, surgeons, midwives and theatre nurses wash their hands and forearms with soap or a surgical scrub solution, and a brush helps work the lather around the nails and fingertips. The soft nylon bristles of this brush are meant for that task, and the small polypropylene head, only about 1 cm high and 3 to 4 cm wide, sits comfortably in the palm.

The brush is supplied non-sterile and is reusable, so each facility should decide how it will be cleaned and reprocessed between users according to its own theatre procedures. Keep a stock large enough that a clean brush is always available at the scrub sink, and replace brushes whose bristles have worn, flattened or split.

Manufacturer

Jain Scientific Equipments Private Limited manufactures this scrubbing brush under its ScienceLab trading name in Ambala, Haryana. Theatres, maternity units, NGOs, dealers and importers can list it with soap, gloves and other scrub-area supplies on one enquiry. Find out more
