Product Name :

Portable Baby/Child L-hgt

Product Code :

SLE/AE/012

Description :

Portable Baby/Child L-hgt (Product Code: SLE/AE/012) is a compact fold-up board used to measure the recumbent length of babies up to 24 months and the standing height of childrenfrom 24 months in child-growth clinics, early-childhood centres and paediatric nutrition surveys. It covers 0–120 cm in 0.1 cm steps on a metal scale, and adjustable feet steady it on uneven floors. It is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, as part of its laboratory equipment range for child-health work.

Specifications

Parameter	Detail
Measures	Recumbent length of babies up to 24 months; standing height of children aged 24 months and above
Measurement range	0–120 cm
Unit and graduation	Centimetres; smallest graduation 0.1 cm
Accuracy	±0.2 cm
Precision	±0.2 cm
Board width	Approximately 25 cm
Measurement scale	Metal, fully integrated, long-lasting and hard-wearing; numeralsoriented along the board; easy to read in low light
Foot/head piece	Large piece with adjustable feet for stability on uneven floors; base for vertical use and headboard for horizontal use
Measuring slide/wedge	Smoothly gliding; lockable or friction-held to avoid reading parallax; reading points marked with pictogram or arrow
Folding	Fold-up, low weight; panels secured with self-contained spring-loaded bolts or spring clasps; parts do not loosen or shake in transit
Carrying	Integrated handle at the point of balance plus removable shoulder/back strap(s); fixings do not hamper horizontal set-up
Set-up and calibration	No tools needed; no calibration needed as all parts have fixed positions
Durability	Light, strong, durable material; firm flat surface; no sharp edges or corners; smooth finish; resistant to high humidity and high temperature; splash proof and shock resistant; for heavy-duty use
Product code	SLE/AE/012
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Baby/Child Length-Height Board Used For?

Children under two are measured lying down: the board is opened flat, the head is held gently again
firmly rned
