Description :

Guedel Airway Sterile Single Use (Product Code: SLE/RAE/04) is a sterile oropharyngeal airway of the Guedel type used to keep a patient's airway open during short-term emergency care and anaesthesia in hospitals, ambulances and recovery areas. This listing is size 2, about 70 mm long, in semi-rigid, transparent EVA/PVC with a straight, reinforced buccal end and a colour-coded or numbered flange. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India.

Specifications

Parameter	Detail
Type	Oro-pharyngeal airway, Guedel type
Size	2
Length	Approx. 70 mm
Material	Polyethylene/vinyl acetate (EVA) – polyvinyl chloride (PVC)
Construction	Semi-rigid, transparent; proximal (buccal) end straight and reinforced
Size identification	Flange colour-coded and/or marked with the size number
Sterility	Sterile, single patient use
Initial sterilisation method	Ethylene oxide gas or gamma radiation
Pack	Individual single-use pack
Product code	SLE/RAE/04
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Guedel Airway Used For?

In an unconscious patient the tongue can fall back and block the airway. A Guedel airway sits over the tongue and prevents it from covering the epiglottis, keeping a passage open for breathing or for bag-mask ventilation during resuscitation and anaesthesia.

Size matters: the correct airway is chosen by measuring the distance from the patient's first incisors to the angle of the jaw, and the numbered or colour-coded flange lets staff pick the right size quickly from a stocked tray. Each airway is for one patient only and is discarded after use. Insertion should be carried out by staff trained in airway care.

What to Specify When Ordering

- The size needed – this listing is size 2, about 70 mm; ask us about other sizes.
- The quantity for ward, theatre or ambulance stock.
- Whether you want a range of sizes to complete an emergency airway tray.
