Product Name :

Auvard Vaginal Retractor

Product Code :

SLE/SI/02

Description :

Auvard Vaginal Retractor (Product Code: SLE/SI/02) is a weighted vaginal speculum used to spread and open the posterior vaginal wall so the cervix can be seen during gynaecological procedures. Its blade is about 80 mm long and 38 mm wide, with a weight on the shank that holds it in position, and it is made of non-magnetic austenitic steel. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, one of the lab equipmentexporters serving hospitals and clinics.

Specifications

Parameter	Detail
Material	Austenitic steel (non-quenched, non-magnetic)
Composition	18–20% chromium; 8–10% nickel
Design	Wide vaginal speculum with a weight fitted on the shank of the blade
Blade length	Approx. 80 mm
Blade width	Approx. 38 mm
Intended use	Spreading and opening the posterior vaginal wall to visualise the cervix; displaying the cervix in operations of the uterine cavity
Use	Reusable
Finish	Passivated
Product code	SLE/SI/02
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is an Auvard Speculum Used For?

In operations on the uterine cavity, the Auvard retractor is placed against the posterior wall of the vagina. The weight keeps the blade down without an assistant holding it, so the cervix stays exposed while it is grasped with forceps and the procedure continues.

It is normally used with the patient in the lithotomy position and is often combined with a separate anterior retractor when more exposure is needed. Medical and nursing colleges also include it in obstetrics and gynaecology instrument-identification teaching. Reprocess it according to your facility's protocol between cases, like every reusable speculum.

What to Specify When Ordering

- Number of retractors needed
- Whether the approx. 80 x 38 mm blade suits your procedures
- Companion instruments for the procedure set, such as uterine forceps, a uterine sound or dilators
