Blade length	Approx. 115 mm
Blade width	Approx. 35 mm
Intended use	Examination of the walls of the vagina and the cervix of the uterus
Product code	SLE/SI/03
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is a Graves Speculum Used For?

The closed blades are inserted, then opened and set so that both vaginal walls are held apart without an assistant. This gives a clear view of the vaginal walls and cervix for inspection and for minor procedures carried out through the speculum.

Choose the blade size to suit the patient, and warm the speculum to body temperature before use for comfort. Clinical skills labs in medical and nursing colleges use the Graves pattern to teach speculum examination on training models. Buyers sourcing lab equipments in India for a new clinic often order it with gloves and examination-room furniture.

What to Specify When Ordering

- How many specula each clinic or ward needs
- Blade size check: approx. 115 x 35 mm, or ask about other sizes
- Whether retractors, a uterine sound or gynaecological gloves are also required

Supplier

Jain Scientific Equipments Private Limited, which trades as ScienceLab, supplies the Graves speculum from Ambala, Haryana, to gynaecology departments, primary health centres, medical and nursing colleges, distributors and importers.
