Product Name :

Deaver Scissors Curved Sharp/Blunt

Product Code :

SLE/SI/06

Email : sales@scilabexport.com
Phone: +91-7082934803

Description :

Deaver Scissors Curved Sharp/Blunt (Product Code: SLE/SI/06) are 14 cm operating scissors with curved blades, one pointed and one blunt at the tip, used for basic surgical operations in theatres, wards and clinics. The blunt blade can pass beneath tissue or dressings while the pointed blade gives a fine tip for starting a cut; both are martensitic steel with 0.40% carbon and 14% chromium. They are manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, one of the lab equipments exporters serving hospitals at home and abroad.

Specifications

Parameter	Detail
Material	Martensitic steel (quenched, magnetic)
Composition	0.40% carbon; 14% chromium
Blades	Curved, with one pointed and one blunt end
Length	14 cm
Type	Operating (surgical) scissors, Deaver pattern
Intended use	Basic surgical operations
Pattern	Curved, sharp/blunt
Finish	Passivated
Use	Reusable
Instructions	Cleaning/sterilisation IFU
Product code	SLE/SI/06
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Are Curved Deaver Scissors Used For?

Curved Deaver scissors are general operating scissors for cutting tissue, sutures and dressings during minor and basic procedures. The curve keeps the tips in view when working on a surface or in a shallow wound, and the compact 14 cm length gives close control for superficial work.

Hold them with the curve facing upward so the tips stay visible, and keep them for tissue and soft materials rather than wire or paper, which dull the edges. Nursing schools and skills labs that buy from educational laboratory suppliers use them for instrument-handling practice and identification.

What to Specify When Ordering

- Pairs required per theatre or clinic
- Curved pattern, straight pattern or both
- Whether they are needed within a basic surgery set
