Description :

Metzenbaum Nelson Scissors Curved Blunt/Blunt (Product Code: SLE/SI/08) are 23 cm surgical dissecting scissors used for cutting or dissecting tissue in operating theatres. Their thin, curved blades with blunt ends and long reach suit dissection in deeper fields, and they are made of quenched martensitic steel with 0.40% carbon and 14% chromium. They are manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, a supplier of scientific & laboratory instruments and supplied to hospitals and teaching institutions.

Specifications

Parameter	Detail
Material	Martensitic steel (quenched, magnetic)
Composition	0.40% carbon; 14% chromium
Pattern	Metzenbaum / Nelson surgical dissecting scissors
Blades	Thin, curved, with blunt ends
Length	23 cm
Intended use	Cutting or dissecting tissue
Finish	Passivated
Use	Reusable
Instructions	Cleaning/sterilisation IFU
Product code	SLE/SI/08
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Are Metzenbaum Scissors Used For?

Metzenbaum-type scissors combine long handles with comparatively short, thin blades, giving fine control at a distance. Surgeons use them to cut soft tissue and, with the blades closed, to push into a tissue plane and then open them to spread tissue apart. The 23 cm length reaches into deep abdominal and chest cavities.

Reserve them for tissue: cutting sutures, drapes or dressings dulls and misaligns the thin blades, so keep a Mayo or Deaver pair for those jobs. Store them with the tips protected. Surgical skills centres that buy through lab equipment exporters use them to teach dissection technique on training models.

What to Specify When Ordering

- Quantity for each theatre
- Confirmation that the 23 cm length suits your procedures, or other lengths you want compared
- Companion tissue and artery forceps
