Description :

Dressing Forceps Standard Straight (Product Code: SLE/SI/33) is a 25 cm springy dissecting forceps without teeth, used to grip and dissect delicate tissue and to hold vessels for coagulation in surgery and nursing care. Surgeons and nurses pick it for its long, flexible arms and jaws that grip well even without teeth. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, a supplier of scientific & laboratory instruments for hospitals, wards and nursing schools.

Specifications

Parameter	Detail
Type	Dissecting forceps, springy
Tips	Without teeth
Jaws	Good gripping
Arms	Flexible
Length	25 cm
Material	Martensitic steel (quenched, magnetic)
Composition	0.20% carbon; 13% chromium
Intended use	Dissecting delicate tissues; gripping, dissecting tissue and coagulation of vessels; used in surgery and nursing
Use	Reusable
Finish	Passivated
Pattern	Straight
Product code	SLE/SI/33
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Are Straight Dressing Forceps Used For?

Held like a pen and closed by finger pressure, the springy arms of this forceps pick up tissue, a dressing or a vessel and let go as soon as the pressure is eased. Because the tips have no teeth, it is the pattern chosen for delicate tissue and for holding a vessel while it is coagulated.

On wards and in dressing rooms the 25 cm length is useful for handling dressings at a distance from the wound; in theatre it gives reach for deeper dissection. Hospitals and nursing schools sourcing laboratory instruments in India can order it together with the matching dressing tray. Check that the tips still close evenly along their length, and clean the jaws after every use.
