Description :

Simon Uterine Scoop Sharp (Product Code: SLE/SI/35) is a rigid uterine scoop with a sharp, oval spoon-shaped blade, used to remove retained products of conception from inside the uterus. Gynaecologists and obstetric units use it for its 12 mm spoon on a 25 cm shaft, which reachesthe uterine cavity once the cervix has been dilated. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, which handles lab equipment export from India as well as domestic hospital orders.

Specifications

Parameter	Detail
Type	Uterine scoop
Shank	Rigid
Blade shape	Oval, in the form of a spoon
Blade edge	Sharp
Spoon width	12 mm
Shaft length	25 cm
Material	Martensitic steel (quenched, magnetic)
Composition	0.20% carbon; 13% chromium
Intended use	Removal of retained products of conception from inside the uterus
Use	Reusable
Finish	Passivated
Product code	SLE/SI/35
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is a Simon Uterine Scoop Used For?

After cervical dilation, the scoop is passed into the uterine cavity and its sharp oval spoon is drawn along the wall to lift out retained products of conception. The rigid shank transmits the operator's control directly to the blade, and the spoon shape gathers the material as it is removed.

Its companion, the Sims Uterine Curette Sharp, has a fenestrated oval blade of the same 12 mm width on a slightly longer shaft, so some clinicians keep both in the evacuation set to switch between a spoon and a fenestrated blade. Medical colleges ordering scientific & laboratory instruments for obstetrics teaching can order the two together. Protect the sharp edge in storage and inspect it before every use.
