Description :

Sims Uterine Curette Sharp (Product Code: SLE/SI/36) is a rigid-shank uterine curette with a sharp, oval fenestrated blade, used to remove retained products of conception from inside the uterus. Its open 12 mm blade on a 26 cm shaft sets it apart from spoon-type scoops and suits gynaecologists who prefer a fenestrated curette for evacuation. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, which is also a lab equipment exporter for hospital buyers.

Specifications

Parameter	Detail
Type	Uterine curette
Shank	Rigid
Blade shape	Oval, fenestrated
Blade edge	Sharp
Spoon width	12 mm
Shaft length	26 cm
Material	Martensitic steel (quenched, magnetic)
Composition	0.20% carbon; 13% chromium
Intended use	Removal of retained products of conception from inside the uterus
Finish	Passivated
Use	Reusable
Instructions	Cleaning/sterilisation IFU
Product code	SLE/SI/36
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is a Sims Uterine Curette Used For?

The Sims curette is used after the cervix has been dilated to clear retained products of conception from the uterine cavity. Its fenestrated blade has an open centre, so the sharp rim does the curetting along the uterine wall while the loosened tissue passes through the window.

At 26 cm the shaft is slightly longer than that of the Simon Uterine Scoop Sharp, and both share a 12 mm width, which makes them easy to pair in one evacuation set. Obstetrics departments buying through laboratory equipment tenders in India can order the curette with dilators and a uterine sound. Store it so the sharp rim is not knocked against other instruments.
